

Automated Employee Onboarding RPA Bot

An enterprise-grade Robotic Process Automation (RPA) solution developed for Tata Consultancy Services (TCS).

Overview

The Automated Employee Onboarding Workflow eliminates manual document handling by orchestrating a digital pipeline that harvests candidate data from emails, validates credentials, and synchronizes information with a central SQL database.

Technology Stack

- **RPA Platform:** Automation Anywhere A360
- **Database:** Microsoft SQL Server 2019
- **Scripting:** VBScript / Regular Expressions (RegEx)
- **OCR Engine:** Google Vision API

Key Features

- **24/7 Monitoring:** Automated harvesting of candidate documents.
- **Intelligent Extraction:** High-accuracy capture (PAN, Aadhaar, IFSC).
- **Validation Logic:** Rule-based verification ensuring consistency.
- **Auto-Communication:** Instant delivery of welcome kits.

Installation

1. Install A360 Bot Agent (16GB RAM recommended).
2. Initialize the `HR_Onboarding_DB` via SQL scripts.

3. Configure credentials in a secure A360 Locker.
